

Part B — Sourcing Strategy & 1000-Company Scale-Up Proposal

Question 1 — Alternative Sourcing Methods

1. DSIR R&D Directory

Why it works: DSIR-recognized companies usually invest in in-house R&D, technical differentiation, and operational capability, which strongly aligns with the Federer profile.

Limitations: Data is not always structured and may require manual extraction.

2. Trade Expo Exhibitor Lists

Examples:

- CPHI India
- BioAsia
- ChemSpec
- DEFEXPO

Why it works: Exhibitors are usually growth-focused manufacturers looking for exports, partnerships, or expansion opportunities.

Limitations: Requires enrichment using LinkedIn and company websites.

3. Pollution Control Board (PCB) Filings

Why it works: Manufacturing companies with operational plants must file Consent to Operate (CTO) and Consent to Establish (CTE) documents.

Limitations: State portals vary in quality and accessibility.

4. MCA + Tofler Databases

Why it works: Useful for identifying promoter-led companies in the ₹50–500Cr range and validating leadership structures.

Limitations: Some financial data may lag by one reporting cycle.

Question 2 — 1000 Company Execution Plan

Week 1 — Build Initial Universe

Target: 4,000 raw companies

Sources:

- MCA
- Tofler
- DSIR directory
- Trade expos
- LinkedIn
- Industry associations

Output: Deduplicated company database.

Week 2 — Eligibility Gating

Automated checks:

- Producer validation (E1)
- India operational presence (E2)
- Revenue range filtering

Methods: Website scraping + AI-assisted classification.

Expected output: ~1,600 qualified companies.

Week 3 — Deep Federer Scoring

Scoring areas:

- differentiation,
- systems maturity,
- growth signals,
- leadership depth,
- sector tailwinds.

Signals collected from:

- LinkedIn
- job postings
- news
- certifications
- ERP/SAP mentions

Expected output: ~1,080 scored companies.

Week 4 — Quality Control & Finalization

Activities:

- Manual review of borderline firms
- Removal of false positives
- Random audit sampling
- Final outreach personalization

Expected output: ~1,000 verified Federer-profile companies.

Quality Control Framework

- Borderline scores reviewed manually
 - PE-controlled firms removed
 - Large conglomerates excluded
 - Random audits performed on approved companies
 - Human review added before final inclusion
-

Expected Funnel Yield

- 4,000 sourced
- 1,600 eligibility-qualified
- 1,080 scored
- 1,000 finalized

Approximate overall yield: 25%
